

Direction for use

Guardian Stone Sealer

Guardian Stone Sealer is specially made for the protection and impregnation of concrete and absorbent or "open" types of stone such as granite, terrazzo, slate and the like.

Apply a thin, even layer of Stone Sealer using a sponge or a soft, non-fluffy cloth.

Allow the product to dry for approx. 15 minutes, then wipe off any excess.

Drying time is approx. 2 hours.

After the product has dried you can test it to ensure satisfactory treatment by carefully pouring a little water onto the surface.

If the water does not pearl on the surface the treatment should be repeated.

Treatment should be repeated 3-6 times a year.

Shake before use.

Keep out of the reach of children.

Always test the product on a piece that is not visible before use.

We hope you enjoy using Guardian Stone Sealer!
